separation of variables and exact solutions to nonlinear pdes is devoted to describing and applying methods of generalized and functional separation of variables used to find exact solutions of nonlinear partial differential equations pdes it also presents the direct method of symmetry reductions and its more general version in addition the authors describe the differential constraint method which generalizes many other exact methods the presentation involves numerous examples of utilizing the methods to find exact solutions to specific nonlinear equations of mathematical physics the equations of heat and mass transfer wave theory hydrodynamics nonlinear optics combustion theory chemical technology biology and other disciplines are studied particular attention is paid to nonlinear equations of a reasonably general form that depend on one or several arbitrary functions such equations are the most difficult to analyze their exact solutions are of significant practical interest as they are suitable to assess the accuracy of various approximate analytical and numerical methods the book contains new material previously unpublished in monographs it is intended for a broad audience of scientists engineers instructors and students specializing in applied and computational mathematics theoretical physics mechanics control theory chemical engineering science and other disciplines individual sections of the book and examples are suitable for lecture courses on partial differential equations equations of mathematical physics and methods of mathematical physics for delivering special courses and for practical training

recovery and separation of molybdenum and rhenium from a process solution was accomplished by a technique developed by the federal bureau of mines involving a combined solvent extraction and activated carbon adsorption procedure the processing sequence required treatment of the solution with SO_2 to reduce the chlorate ion and adjust the ph prior to solvent extraction of molybdenum and rhenium with a tertiary amine molybdenum and rhenium were stripped from the organic phase with an NH_4OH solution and the strip solution was then passed through activated carbon to preferentially adsorb the rhenium after washing entrained molybdenum from the column with a brine solution rhenium was eluted with an $\text{MeOH H}_2\text{O}$ mixture the activated carbon was regenerated with water molybdenum was recovered as NH_4MoO_4 by evaporating the column effluent rhenium in the column eluate was reextracted with a tertiary amine stripped from the organic phase with dilute NH_4OH and recovered as NH_4ReO_4 by evaporating the strip solution the final NH_4ReO_4 product contained
